 Ref. No. 2022-23/78 (PR No. 1000030743)   **(Rfx No. 6100001363)**

Technical Specifications

Item Title: Renewal of Mathworks Campus-Wide License (License No. 31317307) for 3 years.

Item Description: Renewal of MathWorks Campus-Wide License (License No. 31317307), MATLAB-Full Suite (All Toolboxes Unlimited access) for 3 years, MATLAB Academic Online training Suite, MATLAB Grader, Matlab Online, Simulink Online

License Period: April 1, 2023, to March 31, 2026

Other Terms and Conditions

1. The licenses for the software and/or the modules/toolboxes/workbenches should be released automatically to the license server after 30 minutes (half an hour) of no activity / no use of the software even if the base session on the client is active (but no computation is carried out).

2. The software should run on all flavors of operating systems (Microsoft Windows, Unix/Linux, and Mac OS) with the network license server running on a Linux machine (preferably on a suitable latest version of Fedora Release Linux).

3. The software should have a facility for providing access to the licenses running on a network license server via LDAP authentication (user name and password available for IIT Bombay users) and/or SSO (Single Sign-On) enabled. There

should be provisions for analyzing the usage of the licenses of the software. In the absence of LDAP-authentication to the license server, it would be infeasible for the purchase-indenter (LICENSEE) to take further responsibility during the instance of an infringement.

4. The software should allow IIT Bombay users to access the network licenses through the IIT Bombay Open VPN service.

5. Internet connections (other than access to the IITB LAN (intranet)) should not be required every time by the license server administrator and / or every user computer while running the network license server and/or client software and the stand-alone individual licenses.

6. There should be a provision of retaining all the license server logs in the software. Precisely the backups of the log files created should not be deleted by the license server utility or otherwise at the system restart time.

7. The software developer/publisher engages themselves or a third party to identify the usage of their copies of the software for which no licenses purchase exists; then, in that case, such information, if found by the developer/publisher connected with the institute (IIT Bombay), should immediately bring to the notice (or at regular intervals of 3 months). The software developer/publisher should block such illegal usages / stop the usage of such copies of their software directly to protect them from any losses. IIT Bombay shall not take any responsibility for such losses incurred to the software publisher/developer that may be caused by a user. (Precisely the publisher/developer should build a mechanism to defunct the usage of any illegal / pirated copies).

8. The software developer/publisher cannot demand new purchases of their software from IIT Bombay based on the above kind of illegal usage (by a user) data. Such information must be shared

with IIT Bombay without fail immediately. The developer/publisher cannot claim the data as proprietary but can only share with IIT Bombay and not with others.

9. User-details and any sensitive data should not be taken away automatically by any third-party software embeded in the Mathworks Software that runs in the end-user's computer and sent to Mathworks (or third-party servers).

10. The software (or a third-party software embeded in Mathworks software) should possess the capability of preventing the use of a copy of the Mathworks software for which no license(s) has been purchased instead of sending infringement data elsewhere to servers within or outside India.

11. Arrangements should be made to install the software and conduct a user training program for the software at the IIT Bombay campus (online training is also allowed).

12. The bidder should be capable of providing necessary technical support at IIT Bombay.

13. Please provide copies of 3 purchase orders that you have received from Indian Government organizations or organizations funded by the Government of India.

14. If any contract/agreement form(s), are applicable, and other standard forms to be utilized at the time of purchase by the buyer are to be submitted.

15. The current procurement for renewal of license for Matlab software and hence proprietary in nature.
